

Request for Comments

The Department of Labor Standards is soliciting comments concerning a request to classify the construction work involved in the installation of a stone façade masonry rain screen system for a county courthouse, commonly referred to as a “rain screen wall system”. The “rain screen” at issue shall consist of the granite, limestone, or other type of natural or manufactured stone cladding for the building as well as the anchorage or grid system underneath that ties the stone façade to the structural subsurface wall. A gap will be left between the façade and the structural subsurface wall. The joints between the stones shall either be left open, caulked, or mortared depending on the design.

All interested parties are invited to discuss this request at an informal meeting, Monday January 30th, 10:00am at the offices of the Department of Labor Standards, located at the Charles F. Hurley Building, 2nd Floor, 19 Staniford Street, Boston, MA 02114.
